

What is claimed is:

[Claim 1] 1. A reel table comprising a reel spindle opposed to a member to be engaged, the reel spindle being provided on a peripheral surface thereof with a plurality of ridges engageable with the member to be engaged, each of the ridges comprising a tapered end portion having a sharp end and a straight portion integral with the tapered portion and having a side face to be brought into contact with the member to be engaged,

the reel table being characterized in that one of the ridges is approximately equal to the other ridges in the length Y1 of the straight portion, the tapered portion of said one ridge integral with the straight portion having a height Y2 greater than the height Y3 of the tapered portions of the other ridges.

[Claim 2] 2. A recording device comprising a main body for inserting therein an ink cartridge having a take-up roller for winding up an ink sheet, and a reel table provided inside the main body and engageable with the take-up roller, the reel table being provided on a peripheral surface thereof with a plurality of ridges engageable with the take-up roller, each of the ridges comprising a tapered end portion having a sharp end and a straight portion integral with the tapered portion and having a side face to be brought into contact with the take-up roller,

the recording device being characterized in that one of the ridges is approximately equal to the other ridges in the length Y1 of the straight portion, the tapered portion of said one ridge integral with the straight portion having a height Y2 greater than the height Y3 of the tapered portions of the other ridges.
